

4/3 directional high-response control valves, direct operated, with integrated control electronics (OBE)

RE 29067/11.05
Replaces: 02.03

1/14

Type 4WRSE

Sizes 6 and 10
Series 3X
Maximum operating pressure 315 bar
Maximum flow 180 l/min

Type 4WRSE 6 -...-3X/... with integrated control electronics (OBE)

Type 4WRSE 10 -...-3X/... with integrated control electronics (OBE)

Characteristic curves	7 ... 11
Unit dimensions	12, 13

Features

- Direct operated directional high-response control valve with integrated control electronics (OBE) for controlling the direction and magnitude of a flow
- Suitable for position and velocity control
- Actuation by control solenoids
- Electrical position feedback
- High response sensitivity and low hysteresis
- Integrated control electronics (OBE) with interface $\pm 10\text{ V}$ or $4 \dots 20\text{ mA}$
- For subplate mounting:
 - Porting pattern to DIN 24340 form A and ISO 4401
 - Subplates to data sheets RE 45052 and RE 45054 (separate order), see pages 12 and 13

Function, section

These 4/3 directional high-response valves are direct operated components of sandwich plate design. They are actuated by control solenoids. The solenoids are controlled by integrated control electronics (OBE).

Structure:

The valve basically consists of:

- Housing (1) with connection face
- Control spool (2) with compression springs (3 and 4)
- Solenoids (5 and 6)
- Position transducer (7)
- Integrated control electronics (OBE) (8)
- Zero point adjustment (9) accessible via Pg9 cover

Functional description:

- When solenoids (5 and 6) are de-energised, control spool (2) is held by compression springs (3 and 4) in the central position
- Direct operation of control spool (2) through energisation of the control solenoid
e.g. controlling of solenoid "b" (6)
 - Control spool (2) is pushed to the left in proportion to the electrical input signal
 - Connection open from P → A and B → T via orifice-like cross-sections with linear flow characteristics
- De-energisation of solenoid (6)
Control spool (2) is returned by compression spring (3) to the central position

In the de-energised state, control spool (2) is held by the return springs of the solenoid at a mechanical central position. With spool symbols "V" and "Q", this does not correspond to the hydraulic central position!

When the electrical valve control loop is closed, control spool (2) is positioned at the hydraulic central position.

Type 4WRSE 10 V...

Technical data (for applications outside these parameters, please consult us!)

General			
Sizes	Size 6	Size 10	
Weight	kg	3.0	7.3
Installation orientation	Optional, preferably horizontal		
Ambient temperature range	°C	-20 ... +50	
Storage temperature range	°C	-20 ... +80	

Hydraulic (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$ and $p = 100\text{ bar}$)

Operating pressure	Ports P, A, B	bar	up to 315	up to 315		
	Port T	bar	up to 315	up to 315		
Nominal flow $q_{V\text{ nom}} \pm 10\%$ at $\Delta p = 10\text{ bar}$ (Δp = valve pressure differential)		l/min	4	25		
			10	50		
			20	75		
			35	–		
Max. permissible flow		l/min	80	180		
Hydraulic fluid			Mineral oil (HL, HLP) to DIN 51524 and phosphate ester (HFD-R), further hydraulic fluids on enquiry			
Hydraulic fluid temperature range			–20 ... +80			
Viscosity range			20 ... 380, preferably 30 ... 46			
Max. permissible degree of contamination of the hydraulic fluid - cleanliness class to ISO 4406 (c)			Class 18/16/13 ¹⁾			
Hysteresis			≤ 0.05			
Range of inversion			≤ 0.03			
Response sensitivity			≤ 0.03			
Zero point balancing			≤ 1			
Zero point drift with change in:			Size 6	Size 10		
			Hydraulic fluid temperature	%/10 K	< 0.1	< 0.1
			Operating pressure	%/100 bar	< 0.5	< 0.3

Electrical				
Operating voltage	Nominal value (limits)	VDC	24	(19.4 ... 35)
Current consumption	Size 6	A	max. 2	Impulse load: 4 A
	Size 10	A	max. 2.8	Impulse load: 4 A
Interface “A1 “	Command value signal	V	±10	$R_i > 50\text{ k}\Omega$
	Actual value signal	V	±10	$I_{\text{max}} = 2\text{ mA}$
Interface “F1 “	Command value signal	mA	4 ... 20	$R_e > 100\text{ }\Omega$
	Actual value signal	mA	4 ... 20	max. load resistance 500 Ω
Duty cycle		%	100	
Coil temperature ¹⁾		°C	up to 150	
Type of protection of valve to EN 60529			IP 65 with cable socket correctly mounted and locked	

1) Due to the surface temperatures of solenoid coils, observe European standards EN 563 and EN 982!

Note: For details with regard to environment simulation testing in the fields of EMC (electromagnetic compatibility), climate and mechanical stress, see RE 29067-U (declaration on environmental compatibility).

Electrical connection

Component plug pin assign- ment	Contact	Signal	
		Interface A1	Interface F1
Supply voltage	A	24 VDC (19.4 ... 35 VDC), $I_{\max} = 2\text{ A}$ (size 6), $I_{\max} = 2.8\text{ A}$ (size 10), impulse load: 4 A	
	B		
Actual value reference potential	C	Connect reference potential for contact F to $\perp$ on the control side (star-shape)	Reference potential for contact F
Comand value signal	D	$\pm 10\text{ V}$, $R_i > 50\text{ k}\Omega$	4 ... 20 mA, $R_i > 100\text{ }\Omega$
	E	Reference potential for contact D	
Actual value	F	$\pm 10\text{ V}$ $I_{\max} = 2\text{ mA}$	4 ... 20 mA, max. load resistance 500 Ω
Protective conductor	PE	Connected to heat sink and valve body	

Command value: Positive command value at D (interface A1) or 12 ... 20 mA (interface F1) and reference potential at E causes a flow from P → A and B → T.
Negative command value at D (interface A1) or 12 ... 4 mA (interface F1) and reference potential at E causes a flow from P → B and A → T.

Actual value: Interface A1: Positive signal at F and reference potential at C means flow from P → A.
Interface F1: 12 ... 20 mA means flow from P → A.

Connecting cable: Recommendation: – up to 25 m cable length: Type LiYCY 7 x 0.75 mm²
– up to 50 m cable length: Type LiYCY 7 x 1.0 mm²
Outer diameter 6.5 ... 11 mm or 8 ... 13.5 mm, respectively
Connect shield to $\perp$ only on the supply side.

Cable sockets

Cable socket (plastic version)
to DIN EN 175201-804
Separate order,
material no. **R900021267**

Cable socket (metal version)
to DIN EN 175201-804
Separate order,
material no. **R900223890**

Integrated control electronics (OBE)

Block circuit diagram / pin assignment of integrated control electronics (OBE)

Interface A1

Interface F1

Note:

Electrical signals brought out via control electronics (e.g. actual value) must not be used for switching off safety-relevant machine functions! (See also European standard EN 982, "Safety requirements for fluid power systems and components - hydraulics")

¹⁾ PE connection connected to heat sink and valve body

²⁾ Connect pin C to $\perp$ on the control side

³⁾ Output stage current regulated

⁴⁾ Zero point externally adjustable

Characteristic curves (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$)

Pressure/signal characteristic curves (V spool) $p_S = 100\text{ bar}$

Typical leakage flow

Characteristic curves of size 6 (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$)

Typical flow characteristic curve (V, V1 spool)

at 10 bar valve pressure differential or 5 bar per control land

1 = Nominal flow 35 l/min

2 = Nominal flow 10 l/min

Spool ... 20 between characteristic curves 1 and 2

Zero point passage depending on manufacturing tolerance

Valve overlap -1 % ... +1 %

Typical flow characteristic curve (Q2 spool)

at 10 bar valve pressure differential or 5 bar per control land

Characteristic curves of size 10 (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$)

Typical flow characteristic curve (V, V1 spool)

at 10 bar valve pressure differential or 5 bar per control land

Zero point passage depending on manufacturing tolerance
Valve overlap -1 % ... +1 %

Typical flow characteristic curve (Q2 spool)

at 10 bar valve pressure differential or 5 bar per control land

Characteristic curves of size 6 (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$)

Transient function with stepped electrical input signals

Frequency response characteristic curves

Flow/load function at max. valve aperture (tolerance $\pm 10\%$)

Characteristic curves of size 10 (measured with HLP46, $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$)

Transient function with stepped electrical input signals

Frequency response characteristic curves

Flow/load function at max. valve aperture (tolerance $\pm 10\%$)

Type 4WRSE 6 C...

- 1 Valve housing
- 2.1 Control solenoid "a"
with inductive position
transducer
- 2.2 Control solenoid "b"
- 3.1 Control solenoid "b"
with inductive position
transducer
- 3.2 Control solenoid "a"
- 4 Cable socket to
DIN EN 175201-804
(separate order, see page 5)
- 5 Space required to remove
cable socket
- 6 Additional space required for
radius of connecting cable
- 7 Nameplate
- 8 R-ring 9.81 x 1.5 x 1.78
(ports P, A, B, T)
- 9 Machined valve mounting face
position of ports to DIN 243
4401-03-02-0-94 without loc

Subplates: G 341/01 (G1/4)
G 342/01 (G3/8)
G 502/01 (G1/2)

4 hexagon socket head cap screws
ISO 4762 – M5x30-10.9-fZn-240h-L
(friction coefficient total = 0.09 to 0.14)
Tightening torque $M_T = 7 \text{ Nm} \pm 10\%$
material no. R913000316 (separate order)

Required surface quality of mating part

Unit dimensions of size 10 (nominal dimensions in mm)
